VeloSalesAI — Product Feature Specification

Compact build reference for Muse 1.3 Spark / OpenCode

Product vision: VeloSalesAI is an AI sales team for businesses. It connects to customer messaging channels, understands the business catalog, answers customers naturally, qualifies leads, helps create orders, follows up, and shows measurable sales results.

1. AI Sales Agent — CORE

• Understands the business catalog and rules.

• Answers product questions with accurate price, stock, variants and details.

• Recommends suitable products and alternatives.

• Handles common objections and natural-language/typo-heavy messages.

• Maintains conversation context and customer history.

• Never invents products, prices or availability.

• Hands conversations to a human when necessary.

2. Smart Catalog

• Product name, photos, description, price and stock.

• Sizes, colors and product variants.

• Discounts and business-specific rules.

• AI-assisted catalog import from spreadsheets or structured product data.

3. Unified Inbox

• One workspace for WhatsApp, Instagram, Telegram and website chat.

• Conversation history, customer profile and AI/human status.

• Search, filtering and unread indicators.

4. AI Order Creation

• Extract product, variant, quantity and customer details from conversation.

• Create an order draft automatically.

• Order statuses: Pending → Paid → Processing → Shipped → Delivered.

• Human confirmation where appropriate.

5. Lead Scoring

• Automatically classify leads as Hot, Warm or Cold.

• Prioritize customers showing strong buying intent.

• Show why a lead received its score.

6. Automated Follow-ups

• Detect interested customers who did not complete a purchase.

• Schedule personalized follow-ups.

• Business owner controls timing, message style and automation.

7. Payments & Delivery — LATER

• Payment-provider integrations such as Paystack/Flutterwave.

• Delivery fees and delivery options.

• Move customers from conversation → order → payment → delivery.

8. Sales Analytics

• Conversations, leads, orders and conversion rate.

• Revenue and sales attributed to AI.

• Recovered sales from follow-ups.

• Simple daily/weekly/monthly performance dashboard.

9. Human Handoff

• AI can transfer a conversation to staff.

• Staff can take over manually.

• AI can resume when the staff member enables it.

10. Business Memory & Rules

• Store policies such as delivery days, exchange rules and discounts.

• Owner-defined instructions for tone and behavior.

• AI must follow business rules before generating answers.

V1 — BUILD THIS FIRST

Priority	Feature	Goal
P0	Authentication & onboarding	Business can create and configure an account.
P0	Catalog	Business adds products, prices and stock.
P0	WhatsApp connection	Customer messages reach the AI.
P0	AI Sales Agent	AI answers using real catalog/business data.
P0	Conversations	Owner can view and take over chats.
P0	Order creation	AI turns buying intent into an order draft.
P1	Basic dashboard	Owner sees conversations, orders and sales.

V2 / FUTURE

Instagram + Telegram + website channels • voice-message understanding • AI voice replies • Nigerian Pidgin and multilingual support • abandoned-cart recovery • campaigns/broadcasts • coupons • staff accounts • multi-branch businesses • developer API • AI-generated product descriptions and marketing content.

CORE PRODUCT RULE

Do not build everything at once. First prove that a business can connect its catalog and WhatsApp, let VeloSalesAI answer customers accurately, and turn conversations into real orders. Add advanced automation only after real businesses use V1.
